

“I See What You Mean” by Lawrence Argent, installed in 2005 at the Colorado Convention Center.

How much does the bear weigh? 10,000 pounds. How tall is the bear? 40 feet to the crown of its head. How much food would the bear eat per day if it were a real bear? A five foot black bear eats an average 45 pounds of food a day. So, at 40 feet, it might consume 360 pounds of food per day!
